**Subject: Site Investigation Report for the Bridge Road - Bridge Scour Mitigation Project
East of the Intersection of Ojai Road (Highway 150) and Bridge Road
Santa Paula, California**

Dear Ms. Gomez:

This Report presents the findings of an environmental database review and subsequent Site Investigation (SI) for the Bridge Road - Bridge Scour Mitigation Project located on Bridge Road and Santa Paula Creek, east of the intersection of Ojai Road (Highway 150) and Bridge Road in Santa Paula, California (Project Site, Figure 1). The SI was performed by Rincon Consultants, Inc. (Rincon) for GPA Consulting and the County of Ventura.

The County of Ventura has requested this assessment and will use the information for the purposes of evaluating potential impacts to soil and water as part of a minor bridge rehabilitation project. It is our understanding that the Project may consist of the installation of channel scour protection, such as bank protection and/or abutment protection. We have assumed the Project may disturb the upper 24 inches of soil on each side of Santa Paula Creek in the Project Site.

Since the site is occupied by a bridge/roadway and is surrounded by agricultural land use, there is potential for the soil and water beneath the Project Site to be impacted by Aerially Deposited Lead (ADL) and organochlorine pesticides (OCPs)/arsenic. For this reason, the County requested a site investigation consisting of shallow soil sampling at multiple locations within the Project area. Additionally, since Santa Paula Creek was flowing, grab water samples were included in this assessment. This investigation was performed to evaluate water below Santa Paula Creek that would be encountered and dewatered during construction.

Executive Summary

Environmental Data Resources (EDR) was contracted to provide a database search of public lists of sites that generate, store, treat, or dispose of hazardous materials or sites for which a release or incident has occurred. The EDR search was conducted for the Project Site and included data from surrounding sites within specified radii of the Project. The purpose of this EDR database search was to assess whether there are Recognized Environmental Conditions (RECs) associated with the Project Site. The Project Site was not listed in any of the databases searched by EDR. Four nearby properties were listed in databases searched by EDR; however, the properties are not expected to impact the Project Site. No orphan or

unmapped site listings were reported by EDR. No known or suspected RECs associated with the Project Site have been identified by the environmental database search and review.

To evaluate potential ADL and agricultural-related impacts to shallow soil within the limits of the Project Site, soil matrix samples and water samples were collected as part of this SI. Soil matrix samples were collected at 0.0-0.5 feet and 1.5-2.0 feet below existing grade from each of the eight soil boring locations within the project area. Two grab water samples were collected (plus 1 duplicate) from Santa Paula Creek within the project area.

A total of 20 soil matrix samples and duplicates were collected from the eight soil boring locations. The select soil samples were analyzed for pH by EPA Method 9045C, total lead by EPA Method 6010B, Title 22 Metals by EPA Method 6010B, OCPs by EPA Method 8081A and arsenic by EPA Method 6010B.

Soil Matrix Laboratory analytical results were compared to the following screening levels:

- Background Concentrations of Trace and Major Elements in California Soils (Kearney Foundation, 1996)
- San Francisco Bay Regional Water Quality Control Board (SFB RWQCB) Environmental Screening Levels (ESLs) construction worker soil exposure scenario, to be protective of human health (SFB RWQCB 2019)
- Total Threshold Limit Concentration (TTL) and Soluble Threshold Limit Concentration (STLC)

Detectable concentrations of lead were reported for each soil matrix sample analyzed. The concentrations of lead ranged from 5.4 milligrams per kilogram (mg/kg) to 80 mg/kg. However, the detected concentrations of lead were below the construction worker ESL of 160 mg/kg. The detected concentrations of lead in two soil samples exceeded the 50 mg/kg triggering analysis for soluble lead. Therefore, the two samples containing concentrations of lead above 50 mg/kg were analyzed for Soluble Threshold Leaching Concentration (STLC) and TCLP lead.

The detected concentrations of STLC lead ranged from 3.1 milligrams per liter (mg/L) to 3.5 mg/L, which is below the STLC threshold of 5 mg/L. TCLP lead was detected at concentrations less than 1.0 mg/L. Therefore, the detected lead concentrations in soil would classify as non-hazardous waste if excavated. Therefore, no further assessment or hazardous waste analysis for ADL in soil is required.

Detectable concentrations of arsenic were reported for each soil matrix sample analyzed. The concentrations of arsenic ranged from 2.8 mg/kg to 8.6 mg/kg. Although the detected concentrations of arsenic were above the construction worker ESL of 0.98 mg/kg, all of the concentrations detected were within the accepted California background concentration range for arsenic in soil, as published by the Kearney Foundation (0.6 mg/kg to 11 mg/kg). It is typical for concentrations of arsenic to be above screening levels such as the ESLs. The detected arsenic concentrations in soil would classify as non-hazardous waste if excavated. Therefore, no further assessment or hazardous waste analysis for arsenic in soil is required.

All of the other detected concentrations of metals were below the established ESLs and hazardous waste thresholds.

The following OCPs were detected at concentrations above the laboratory detection limits: 4,4-DDD, 4,4-DDE, and 4,4-DDT. No other pesticides were detected above the laboratory detection limits. The detected concentrations of pesticides in soil would classify as non-hazardous waste, if excavated. Therefore, no further assessment or hazardous waste analysis for OCPs in soil is required.

Rincon collected two grab water samples from Santa Paula Creek within the Project Site to evaluate the water at the site. One water sample was collected near the Bridge at the northern section of the Project and another sample was collected near the dry creek crossing on the southern section of the Project Site.

A total of three grab water samples (including one duplicate sample) were collected from locations RW1 and RW2. Water laboratory analytical results were compared to the following screening levels:

- Background Concentrations of Trace and Major Elements in California Soils (Kearney Foundation, 1996)
- Maximum Contaminant Levels (MCLs) Priority, SFB RWQCB (SFB RWQCB 2019) Total Lead and Arsenic

Neither lead, arsenic or OCPs were detected above laboratory reporting limits in the two grab water samples and one duplicate water sample collected as part of this SI. Therefore, no further assessment or hazardous waste analysis pertaining to water at the project site is required.

Based on the Site Investigation completed, the shallow soil and water beneath the Project Site can be handled as non-hazardous waste and no further assessment or hazardous waste analysis is required.

Scope of Work

Standard Environmental Record Sources

Environmental Data Resources (EDR) was contracted to provide a database search of public lists of sites that generate, store, treat, or dispose of hazardous materials or sites for which a release or incident has occurred. The EDR search was conducted for the Project Site and included data from surrounding sites within specified radii of the Project. The purpose of this EDR database search was to assess whether there are Recognized Environmental Conditions (RECs) associated with the Project Site.

A copy of the EDR report, which specifies the ASTM E1527-13 search distance for each public list, is included as Attachment 1. As shown on the attached EDR report, federal, state, and county lists were reviewed as part of the research effort. Please refer to Attachment 1 for a complete listing of sites reported by EDR and a description of the databases reviewed.

The Map Findings Summary, included in the EDR report, provides a summary of the databases searched, the number of reported facilities within the search radii, and whether the facility is located onsite or adjacent to the Project Site. The following information is based on our review of the Map Findings Summary and the information contained in the EDR report.

Project Site

The Project Site was not listed on any of the regulatory databases reviewed.

Offsite Properties

Offsite properties listed by EDR fall under two general categories of databases: those reporting unauthorized releases of hazardous substances (e.g., Leaking Underground Storage Tank [LUST], National Priority List [a.k.a. Superfund sites], and corrective action facilities), and databases of businesses permitted to use hazardous materials or generate hazardous wastes, for which an unauthorized release has not been reported to a regulatory agency.

Rincon reviewed the EDR Radius Map and select detailed listings to evaluate their potential to impact the Project Site, based on the following factors:

- Reported distance of the facility from the Project Site;
- The nature of the database on which the facility is listed, and/or whether the facility was listed on a database reporting unauthorized releases of hazardous materials, petroleum products, or hazardous wastes;
- Reported case type (e.g., soil only, failed underground storage tank [UST] test only);
- Reported substance released (e.g., chlorinated solvents, gasoline, metals);
- Reported regulatory agency status (e.g., case closed, “no further action”); and,
- Location of the facility with respect to the reported groundwater flow direction (discussed in the Geology and Hydrogeology section of this report)

Facilities/properties that were interpreted by Rincon to be of potential environmental concern to the Project Site, based on one or more of the factors listed above, are summarized in Table 1. In accordance with ASTM E1527-13, contamination migration pathways in soil, groundwater, and soil vapor were considered in our analysis of offsite properties of potential environmental concern.

Table 1 EDR Listing Summary of the Project Site and Select Sites Within One-Eighth Mile of the Project Site

Site Name	LightBox Site ID	Site Address	Distance from Project Site	Database Reference	Comments
Adjacent Properties					
Freddie R Trucker	1	3554 Ojai Road	500-feet southwest of the Project Site	HIST UST	Historic underground storage tank containing motor vehicle fuel/waste oil. Installed in 1968
George Edward Geis, Jr.	A2	3510 Ojai Road	500-feet southwest of the Project Site	HIST UST	Personal historic underground storage tank reported containing regular fuel.
				VENTURA CO. UST	Inactive facility status.
Sue Cederquist Yamamoto	5	4099 Ojai Road	500-feet west of the Project Site	VENTURA CO. UST	Inactive facility status.
Baker W P Facility	6	1006 Amber Drive	500 feet west-southwest of the Project Site	SEMS	No pertinent information in the EDR report.

Environmental Records Review - Conclusions

The Project Site was not listed in any of the databases searched by EDR. Four nearby properties were listed in databases searched by EDR (Table 1); however, the properties are not expected to impact the Project Site. No orphan or unmapped site listings were reported by EDR.

No known or suspected RECs associated with the Project Site have been identified.

Soil Matrix and Grab Water Scope of Work

To evaluate potential ADL and agricultural-related impacts to shallow soil and water within the limits of the Project Site, both soil matrix and grab water samples were collected as part of this SI. We have assumed the Project will disturb the upper 24 inches of soil. Therefore, soil sampling extended to a maximum depth of 2 feet below grade. Soil matrix samples were collected at 0.0-0.5 feet (surface) and 1.5-2 feet below existing grade from each of the eight soil boring locations (Figure 2).

Soil Matrix Laboratory Analysis: A total of 16 soil samples were collected, plus 4 duplicates [20% of the total samples collected]. The samples were analyzed for the following:

- **Total Lead (EPA Method 6010B)** – A total of 20 soil matrix samples were analyzed for lead. Two of the soil samples (10% of the samples collected analyzed for lead) were analyzed for Title 22 Metals by EPA Method 6010B.
- **OCPs (EPA Method 8081A) and arsenic (EPA Method 6010B)** – A total of 20 soil matrix samples were analyzed for OCPs and arsenic.
- **pH (EPA Method 9045C)** – Pursuant to the Caltrans Guidance, at least 10% of the samples collected (total of 4 soil matrix samples) were analyzed for pH.

It was not feasible to collect groundwater samples at the site because the creek was flowing. Therefore, grab water samples were collected from the Santa Paula Creek. Rincon collected two grab water samples from within the Project Site to evaluate water at the site (Figure 2). One water sample was collected near the Bridge at the northern section of the Project and another sample was collected near the dry creek crossing on the southern section of the Project Site.

Grab Water Laboratory Analysis: Two grab water samples were collected (plus 1 duplicate) and analyzed for the following:

- **Total Lead and Arsenic (EPA Method 6010B)** – Two grab water samples and one duplicate sample were analyzed for lead and arsenic.
- **OCPs (EPA Method 8081A)** – A total of 3 grab water samples were analyzed for OCPs.

Soil Matrix and Grab Water Sampling

On April 16, 2020, Rincon advanced eight soil borings (RB1 through RB8) and collected two grab water samples. The soil borings and grab water samples were located as follows and are depicted on the Sample Location Map (Figure 2):

Rincon Boring (RB)1 through RB4: Located along both sides of the bridge at Bridge Road

RB5: Near the temporary staging area/Highway 150

RB6: River bottom soil sample collected from the northern area of the project

RB7: River bottom soil sample collected from the middle area of the project

RB8: Near Highway 150

Rincon Water (RW)1: Located north of the Bridge at Bridge Road, in the northern section of the Project area

RW2: Near the dry creek crossing on the southern portion of the Project area

Soil sampling was conducted using a stainless-steel hand auger. When the target sampling depth was reached, soil samples were collected in 8-ounce glass jars with Teflon-lined lids, provided by the analytical laboratory. Soil matrix samples were collected at the surface (0.0-0.5 feet below grade) and from 1.5-2.0 feet below grade in each of the eight soil borings. The soil matrix samples were sealed, the label was applied, and the samples were stored on wet ice and in a cooler chilled to 4 degrees Celsius.

The grab water samples were collected using direct submersion hand technique, directly into the appropriate laboratory-supplied bottles at approximately mid-stream, mid-depth, and at the location of greatest flow. Once filled, the grab water sample bottles were sealed, the label was applied, and the samples were stored on wet ice and in a cooler chilled to 4 degrees Celsius.

The soil and water samples were couriered to BC Laboratories, Inc. (BC) of Bakersfield, California under chain of custody protocol.

The boring/grab water sample locations were logged within six inches accuracy in North American Datum using GPS. An unretained portion of the sample interval was used to classify the soils. Observations made in the field were recorded on the boring log created for each boring. The boring logs include classification of the soil using the Unified Soil Classification System. Copies of the boring logs are included in Attachment 2. No stained or odorous soil was noted during sampling.

Decontamination of reusable sampling equipment was completed before collection of each sample at each specific depth interval. Equipment to be decontaminated included the hand auger, hand tools, and all other equipment that contacted the soil or surface water during sampling activities. The sampling equipment was washed in clean 5-gallon buckets using a phosphate-free detergent with a final rinse using deionized water.

Soil Matrix Results

A total of 20 soil matrix samples and duplicates were collected from the eight boring locations (RB1 through RB8). A copy of the laboratory analytical report is included as Attachment 3. A summary of the analytical results is included in Tables 1 and 2. Laboratory analytical results were compared to the following screening levels:

- Background Concentrations of Trace and Major Elements in California Soils (Kearney Foundation, 1996)
- San Francisco Bay Regional Water Quality Control Board (SFB RWQCB) Environmental Screening Levels (ESLs) construction worker soil exposure scenario, to be protective of human health (SFB RWQCB 2019)
- Total Threshold Limit Concentration (TTLC) and Soluble Threshold Limit Concentration (STLC)

Metals and pH

Detectable concentrations of lead were reported for each soil matrix sample analyzed. The concentrations of lead ranged from 5.4 milligrams per kilogram (mg/kg) in the sample collected from

RB7 at 0.5 foot to 80 mg/kg in the sample collected from RB4 at 0.5 foot. However, the detected concentrations of lead were below the construction worker ESL of 160 mg/kg. The detected concentrations of lead in soil samples RB4-0.5 (80 mg/kg) and RB4-2.0 (78 mg/kg) exceeded the 50 mg/kg triggering analysis for soluble lead. Therefore, the two samples containing concentrations of lead above 50 mg/kg were analyzed for Soluble Threshold Leaching Concentration (STLC) and TCLP lead.

The detected concentrations of STLC lead ranged from 3.1 milligrams per liter (mg/L) in the RB4-0.5 sample to 3.5 mg/L in the RB4-2.0 sample, which is below the STLC threshold of 5 mg/L. TCLP lead was detected at concentrations less than 1.0 mg/L. Therefore, the detected lead concentrations in soil would classify as non-hazardous waste if excavated.

Detectable concentrations of arsenic were reported for each soil matrix sample analyzed. The concentrations of arsenic ranged from 2.8 mg/kg in the sample collected from RB2 at 0.5 feet to 8.6 mg/kg in the sample collected from RB5 at 2 feet. Although the detected concentrations of arsenic were above the construction worker ESL of 0.98 mg/kg, all of the concentrations detected were within the accepted California background concentration range for arsenic in soil, as published by the Kearney Foundation (0.6 mg/kg to 11 mg/kg). It is typical for concentrations of arsenic to be above screening levels such as the ESLs. The detected arsenic concentrations in soil would classify as non-hazardous waste if excavated. Therefore, no further assessment or hazardous waste analysis for arsenic is required.

All of the other detected concentrations of metals were below the established ESLs. pH ranged from 7.70 to 8.16 in the four samples analyzed. Therefore, no further assessment or hazardous waste analysis for metals is required.

Organochlorine Pesticides

The following pesticides were detected at concentrations above the laboratory detection limits: 4,4-DDD, 4,4-DDE, and 4,4-DDT. No other pesticides were detected above the laboratory detection limits.

4,4-DDD: Concentrations ranged from non-detect (below laboratory detection limits) to 0.0013 mg/kg (RB3-0.5 and RB4-2.0). None of the concentrations detected exceeded the SFB RWQCB ESL for construction worker safety.

4,4-DDE: Concentrations ranged from non-detect to 0.0032 mg/kg (RB4-2.0). None of the concentrations detected exceeded the SFB RWQCB ESL for construction worker safety.

4,4-DDT: Concentrations ranged from non-detect to 0.019 mg/kg (RB3-0.5). None of the concentrations detected exceeded the SFB RWQCB ESL for construction worker safety.

The detected concentrations of pesticides in soil would classify as non-hazardous waste, if excavated. Therefore, no further assessment or hazardous waste analysis is required.

Grab Water Results

A total of three grab water samples (including one duplicate sample) were collected from locations RW1 and RW2. A copy of the laboratory analytical report is included as Attachment 3. A summary of the analytical results is included in Table 3. Laboratory analytical results were compared to the following screening levels:

- Background Concentrations of Trace and Major Elements in California Soils (Kearney Foundation, 1996)

- Maximum Contaminant Levels (MCLs) Priority, SFB RWQCB (SFB RWQCB 2019) Total Lead and Arsenic

Neither lead, arsenic or OCPs were detected above laboratory reporting limits in the two grab water samples and one duplicate water sample collected as part of this SI. Therefore, no further assessment or hazardous waste analysis for water is required.

Quality Control/Quality Assurance

BC performed Tier II data validation documenting the quality assurance/quality control (QA/QC) measures employed during laboratory analysis of the soil matrix and grab water samples. The data quality review ensured that data quality objectives were met for each of the following quality control measures:

- Data completeness
- Initial calibration
- Holding times and preservation
- Laboratory blanks
- Laboratory control standards
- Matrix spike/matrix spike duplicates
- Compound identification and quantitation
- Sample Replicates

Overall, the QA/QC measures met BC's data quality objectives, as described in the analytical reports provided in Attachment 3.

Field Quality Control

Duplicate samples were utilized for field QC. A total of four duplicate soil matrix samples and one duplicate grab water sample were collected as part of this SI. The duplicate samples were collected from soil sample locations RB1-2.0 (DUP 1), RB4-2.0 (DUP 2), RB7-0.5 (DUP 3), and RB8-2.0 (DUP 4). A duplicate grab water sample was collected at location RW1 (DUP 1). The duplicate samples were collected immediately after the original sample was collected. The field duplicates were analyzed for total lead, OCPs, and arsenic. In general, the detected concentrations of constituents in the duplicate soil and grab water samples were similar to the concentrations detected in the original samples collected.

An equipment rinsate sample was collected from the hand auger sample equipment at the end of the day. The rinsate sample was analyzed for total lead, OCPs, and total arsenic. None of the constituents analyzed were detected above the laboratory detection limits, which indicates that the decontamination process was effective (Table 4).

Conclusions and Recommendations

Constituent	Conclusion/Recommendation
Soil Samples	
Total Lead (EPA Method 6010B)	<ul style="list-style-type: none">The detected concentrations of lead were below the construction worker ESL of 160 mg/kg. The concentrations of lead in the soil samples collected from RB4 at 0.5 foot and 2.0 feet were above 50 mg/kg. Therefore, STLC and TCLP analyses were performed. The detected concentrations of STLC and TCLP lead in samples were below hazardous waste thresholds.Soil beneath the project site can be handled as non-hazardous waste and no further assessment or hazardous waste analysis is required.
Arsenic (EPA Method 6010B)	<ul style="list-style-type: none">Although the detected concentrations of arsenic were above the construction worker ESL of 0.98 mg/kg, all of the concentrations detected were within the accepted California background concentration range for arsenic in soil. The levels of arsenic were also below hazardous waste thresholds. All of the other detected concentrations of metals were below the established ESLs and hazardous waste thresholds.Soil beneath the project site can be handled as non-hazardous waste and no further assessment or hazardous waste analysis for arsenic is required.
Organochlorine Pesticides (OCPs) (EPA Method 8081A)	<ul style="list-style-type: none">All of the detected concentrations of OCPs in soil were below the construction worker ESLs and hazardous waste thresholds.Soil beneath the project site can be handled as non-hazardous waste and no further assessment or hazardous waste analysis is required.
Grab Water Sample	
Total Lead (EPA Method 6010B)	<ul style="list-style-type: none">Lead was not detected in the grab water sample.Water beneath the Project Site can be handled as non-hazardous waste and no further assessment or hazardous waste analysis is required.
Arsenic (EPA Method 6010B)	<ul style="list-style-type: none">Arsenic was not detected in the grab water sample.Water beneath the Project Site can be handled as non-hazardous waste and no further assessment or hazardous waste analysis is required.
Organochlorine Pesticides (OCPs) (EPA Method 8081A)	<ul style="list-style-type: none">OCPs were not detected in the grab water sample.Water beneath the Project Site can be handled as non-hazardous waste and no further assessment or hazardous waste analysis is required.

- All of the detected concentrations of OCPs in soil were below the construction worker ESLs and hazardous waste thresholds.
- The detected concentrations of lead were below the construction worker ESL of 160 mg/kg. The concentrations of lead in the soil samples collected from RB4 at 0.5 foot and 2.0 feet were above 50 mg/kg. Therefore, STLC and TCLP analyses were performed. The detected concentrations of STLC and TCLP lead in samples were below hazardous waste thresholds.
- Although the detected concentrations of arsenic were above the construction worker ESL of 0.98 mg/kg, all of the concentrations detected were within the accepted California background concentration range for arsenic in soil. The levels of arsenic were also below hazardous waste thresholds. All of the other detected concentrations of metals were below the established ESLs and hazardous waste thresholds.
- Lead, arsenic, and OCPs were not detected in the grab water sample.

Based on the Site Investigation completed, the shallow soil and water beneath the Project Site can be handled as non-hazardous waste and no further assessment or hazardous waste analysis is required.

Limitations

This report has been prepared for and is intended for the exclusive use of GPA Consulting and the County of Ventura. The contents of this report should not be relied upon by any other party without the written consent of Rincon Consultants, Inc. The contents of this report reflect the views of the authors, who are responsible for the facts and accuracy of the data presented herein. The contents do not necessarily reflect the official views or policies of the County of Ventura, State of California, or the Federal Highway Administration. This report does not constitute a standard, specification, or regulation.

Our conclusions regarding the Project Site are based on observations of existing site conditions and the results of a limited subsurface sampling program. The results of this evaluation are qualified by the fact that only limited sampling and analytical testing was conducted during this assessment.

This scope was not intended to completely establish the quantities and distribution of contaminants present at the Project Site. The concentrations of contaminants measured at any given location may not be representative of conditions at other locations. Furthermore, conditions may change at any particular location as a function of time in response to natural conditions, chemical reactions and other events. Conclusions regarding the condition of the Project Site do not represent a warranty that all areas within the Project Site are similar to those sampled.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/30/2020 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 2 UST sites within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 01/30/2020	Source: EPA
Date Data Arrived at EDR: 02/05/2020	Telephone: N/A
Date Made Active in Reports: 02/14/2020	Last EDR Contact: 03/04/2020
Number of Days to Update: 9	Next Scheduled EDR Contact: 04/13/2020
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Number of Days to Update: 62	Next Scheduled EDR Contact: 04/06/2020
	Data Release Frequency: Quarterly

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 12/02/2019	Source: Environmental Protection Agency

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 01/30/2020

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Version Date: 2012

South Map: 5619412 SANTA PAULA, CA
Version Date: 2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

06111C0781E	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
SANTA PAULA PEAK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Cortina

Soil Surface Texture: stony sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	35 inches	stony sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 42 Min: 14	Max: 7.8 Min: 6.6
2	35 inches	59 inches	stratified very stony loamy sand to very stony loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 42 Min: 14	Max: 7.8 Min: 6.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: RIVERWASH

Soil Surface Texture: sand

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 76 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	5 inches	sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: Min:
2	5 inches	59 inches	stratified coarse sand to sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: Min:

Soil Map ID: 3

Soil Component Name: GARRETSON

Soil Surface Texture: gravelly loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	22 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 14 Min: 4	Max: 7.8 Min: 6.1
2	22 inches	59 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 14 Min: 4	Max: 7.8 Min: 6.1

Soil Map ID: 4

Soil Component Name: MOCHO

Soil Surface Texture: gravelly loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	16 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 14 Min: 4	Max: 8.4 Min: 7.9
2	16 inches	59 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 14 Min: 4	Max: 8.4 Min: 7.9

Soil Map ID: 5

Soil Component Name: CASTAIC

Soil Surface Texture: silty clay loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division

Telephone: 916-323-1779

Oil and Gas well locations in the state.

California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon

Source: Department of Public Health

Telephone: 916-210-8558

Radon Database for California

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

Reported: 05/07/2020 11:49
Project: Soil/Water Samples
Project Number: Santa Paula Bridge Rd 19-08335
Project Manager: Scott English

Notes And Definitions

- J Estimated Value (CLP Flag)
- MDL Method Detection Limit
- ND Analyte Not Detected
- PQL Practical Quantitation Limit
- A01 Detection and quantitation limits are raised due to sample dilution.
- A02 The difference between duplicate readings is less than the quantitation limit.
- A07 Detection and quantitation limits were raised due to sample dilution caused by high analyte concentration or matrix interference.
- A10 Detection and quantitation limits were raised due to matrix interference.
- A20 Surrogate is low due to matrix interference. Interference verified through second extraction/analysis.
- pH1:1 pH result reported on a 1:1 dilution of sample
- Q03 Matrix spike recovery(s) was(were) not within the control limits.
